

VPS for Fun and Profit!

David Lachut

30 September 2015

Outline

Who is this guy?

What is a VPS?

Why would I want one?

How could I use it?

Wow! Where can I get one?

Servers are great!

- ▶ Cheap
- ▶ Reliable
- ▶ Easy to use
- ▶ Convenient
- ▶ Useful

Who is this guy?

- ▶ David Lachut
- ▶ PhD Candidate in Computer Science
 - ▶ *Holistic Home Energy Management: From Sensing to Data Analytics*
- ▶ B.S. Physics, 2009, University of Arkansas–Fayetteville
- ▶ Linux and Open Source Enthusiast

Disclaimers

- ▶ This presentation is full of my opinions. It does not necessarily represent the beliefs or opinions of UMBC, the MPSS Lab, the NSF, the State of Maryland, Samsung Electronics America, or any other group with whom I may be affiliated.
- ▶ All trademarks herein are the property of their respective owners.
- ▶ No animals were harmed in the making of this presentation.

What is virtualization?

- ▶ A software simulation of computer hardware
- ▶ A way to run multiple computers on the same computer at the same time
- ▶ Para-virtualization shares a kernel with multiple environments

What is a Virtual Private Server?

| A VPS is... | A VPS isn't... |
|---------------------|-----------------------|
| An actual server | Just a webhost |
| In <i>THE CLOUD</i> | An on-premises server |
| Virtualized | A dedicated server |

Why you wouldn't use a VPS

- ▶ Data is super-duper-top-secret
- ▶ Have specific or arcane requirements
- ▶ Need access to the bare-metal
- ▶ "It's stupidity. It's worse than stupidity"
 - ▶ *RMS*

Why you would use a VPS

There is NO CLOUD, just other people's computers

- ▶ Someone else does hardware maintenance
- ▶ Always on for a predictable cost
- ▶ Super high speed
- ▶ I am ROOT

What can I do with one of these VPS things?

You can run ...

Sync your calendars and contacts

The screenshot shows the ownCloud Calendar application running in a Mozilla Firefox browser window. The browser's address bar displays the URL `https://oc.lachut.net/owncloud/index.php/apps/calendar`. The page title is "Calendar - ownCloud".

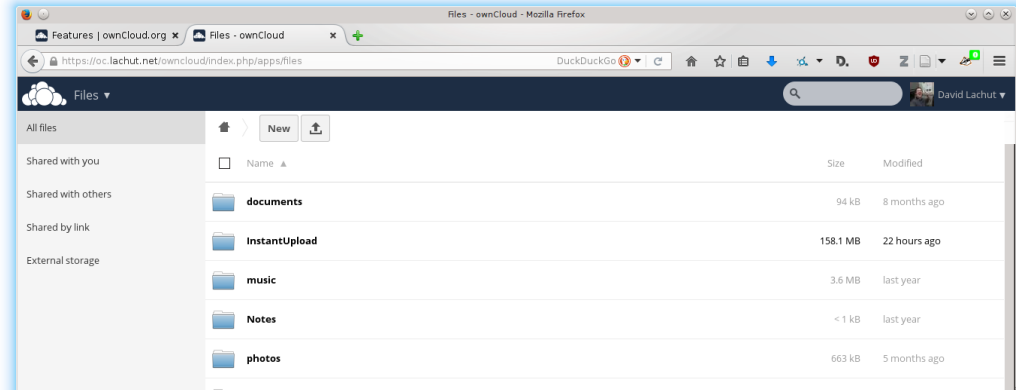

The calendar interface includes a sidebar on the left with the following elements:

- Navigation buttons: "Sep. 27 - Oct. 3 2015", "<", ">", "Day", "Week", "Month", and "Today".
- A "New Calendar" button.
- A list of calendars: "Amanda" (red), "Tasks" (yellow), "Work" (blue), and "Life" (green). Each entry has icons for link, share, download, edit, and delete.

The main calendar view is a weekly grid for the period from Sunday, September 27 to Saturday, October 3, 2015. The time slots range from 05:00 to 10:00. The grid shows various events, including "Exercise", "Shower", "Breakfast", "Ready", "Commute", and "Work".

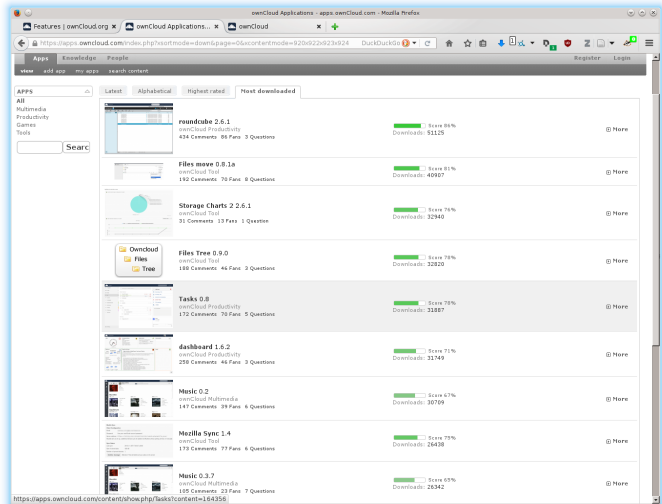

| | Sun. 27. Sep. | Mon. 28. Sep. | Tue. 29. Sep. | Wed. 30. Sep. | Thu. 1. Oct. | Fri. 2. Oct. | Sat. 3. Oct. |
|---------|-------------------------|-------------------|-------------------|-------------------|-------------------|-------------------|-------------------|
| All day | | | | | | | |
| 05:00 | | | | | | | |
| 06:00 | | 05:30 - Exercise | 05:30 - Exercise | 05:30 - Exercise | 05:30 - Exercise | 05:30 - Exercise | |
| 07:00 | | 06:00 - Shower | 06:00 - Shower | 06:00 - Shower | 06:00 - Shower | 06:00 - Shower | |
| 08:00 | | 06:30 - Breakfast | 06:30 - Breakfast | 06:30 - Breakfast | 06:30 - Breakfast | 06:30 - Breakfast | 06:30 - Exercise |
| 09:00 | 09:00 - 10:15 Breakfast | 07:00 - Ready | 07:00 - Ready | 07:00 - Ready | 07:00 - Ready | 07:00 - Ready | 07:00 - Shower |
| 10:00 | | 07:30 - Commute | 07:30 - Commute | 07:30 - Commute | 07:30 - Commute | 07:30 - Commute | 07:30 - Breakfast |

Sync your files, Back-up your photos

Extend it with apps

- ▶ ToDo List
- ▶ Music
- ▶ Photo gallery
- ▶ RSS
- ▶ Firefox Sync
- ▶ Note taking
- ▶ Document editing
- ▶ Journal
- ▶ External storage
- ▶ Encryption
- ▶ E-Mail

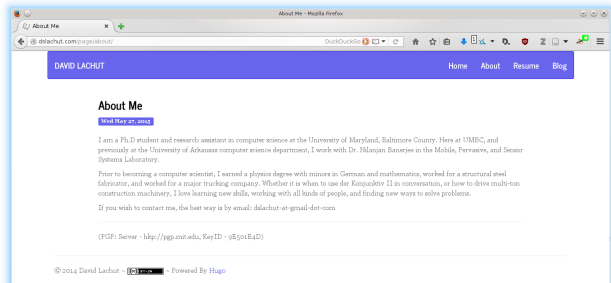

You can run ...

Host your own website

- ▶ Replace Blogger and Wordpress
- ▶ Written in Go
- ▶ Many customizable templates
- ▶ Static site generator
- ▶ Write posts in Markdown

You can run ...

The screenshot shows the GitHub repository page for 'morganbengtsson/microreader'. The repository is described as a 'Very simple web based RSS/Atom feed reader. Written in python with bottle.' It has 340 commits, 5 branches, 13 releases, and 5 contributors. The current branch is 'master'. The file list includes 'screenshots', 'static', 'views', '.gitignore', 'README.md', 'app.wsgi', 'favicon.py', 'microreader.py', 'models.py', and 'requirements.txt'. The README.md file is selected, showing its content. The right sidebar contains links for 'Code', 'Issues', 'Pull requests', 'Wiki', 'Pulse', and 'Graphs'. At the bottom, there is an 'SSH clone URL' and a 'Download ZIP' button.

morganbengtsson / microreader

Very simple web based RSS/Atom feed reader. Written in python with bottle.

340 commits 5 branches 13 releases 5 contributors

Branch: master microreader / +

Update README.md

morganbengtsson authored on Jun 2 latest commit bb695a3f0

| | | |
|------------------|------------------------------------|---------------|
| screenshots | Fix. | a year ago |
| static | Border width adjustment. | 11 months ago |
| views | Optimize | 7 months ago |
| .gitignore | ignore idea directory from pycharm | 2 years ago |
| README.md | Update README.md | 4 months ago |
| app.wsgi | apache deploy. | 2 years ago |
| favicon.py | Indentation | 2 years ago |
| microreader.py | Fix. | 7 months ago |
| models.py | Fix. | 7 months ago |
| requirements.txt | Small tweaks and updated readme | a year ago |

README.md

Microreader is a simple, lightweight and hackable self hosted RSS/Atom reader. Written in [Python](#) with help of the web framework [Bottle](#), and the orm [Peewee](#). Microreader requires at least Python version 3.

Track RSS feeds

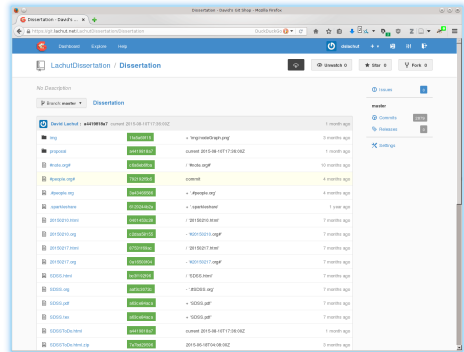

- ▶ Replace Google Reader
- ▶ Subscribe to feeds
- ▶ Convenient browsing in one place
- ▶ Use from any computer

You can run ...

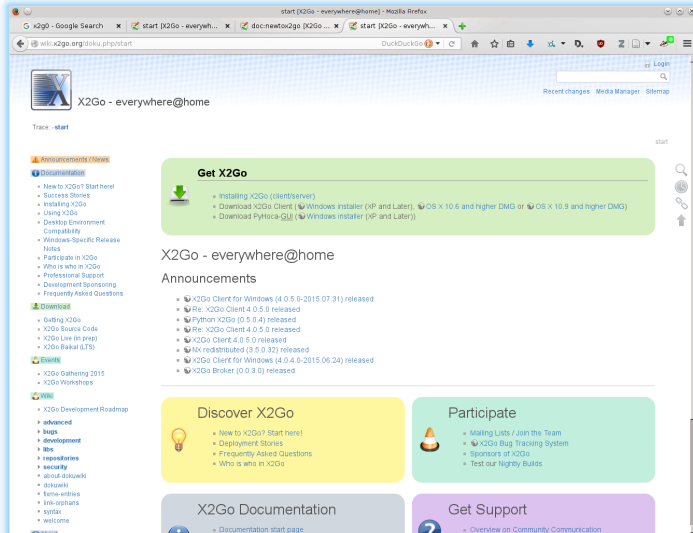

Host your own Github

- ▶ Gogs: The Go Git Service
- ▶ Github, but with free, private repos
- ▶ No integrated bug-tracker
- ▶ No integrated wiki
- ▶ Fast, minimal-dependencies

You can run ...

My Raspberry Pi has a Xeon processor

- ▶ X2Go is a superb remote-desktop for Linux hosts
- ▶ With Linux, Windows, and OSX clients
- ▶ Fast enough for Youtube
- ▶ Have a high-power computer that feels local, even on a SBC

You can run ...

The screenshot shows a web browser window displaying the GitHub repository for `apenwarr/sshuttle`. The repository is described as a "Transparent proxy server that works as a poor man's VPN. Forwards over ssh. Doesn't require admin. Works with Linux and MacOS. Supports DNS tunneling." It has 198 commits, 2 branches, 25 releases, and 14 contributors. The current branch is `master`. The repository includes a README, Documentation, compat, ui-macos, version, .gitignore, and LICENSE files. The right sidebar shows the SSH clone URL as `git@github.com:aper` and a button to Download ZIP.

apenwarr/sshuttle

Transparent proxy server that works as a poor man's VPN. Forwards over ssh. Doesn't require admin. Works with Linux and MacOS. Supports DNS tunneling.

198 commits 2 branches 25 releases 14 contributors

Branch: master sshuttle / +

README: add a suggestion to try the MacOS GUI app. 2 comments

apenwarr authored on Aug 10, 2012 latest commit 9ce2fa0f9

| | | |
|---------------|---|-------------|
| Documentation | Added --exclude-from feature. | 3 years ago |
| compat | compat/ssubprocess.py: some python versions don't have os.closerange(). | 5 years ago |
| ui-macos | Fix runpython.do for systems with unexpected configurations. | 4 years ago |
| version | Import the non-pandoc manpage generator from redo. | 4 years ago |
| .gitignore | Replace make-based build with redo-based build. | 5 years ago |
| LICENSE | Initial commit. | 6 years ago |

SSH clone URL

git@github.com:aper

You can clone with [HTTPS](#), [SSH](#), or [Subversion](#).

Download ZIP

sshuttle is a simple VPN

- ▶ Transparent proxy server
- ▶ Actually runs on local computer
- ▶ Requires local SSH, Python, and Root
- ▶ Requires remote server with Python and SSH
- ▶ Tunnel all network traffic over SSH

Mosh About News Getting Mosh Usage Technical info FAQ Contact Mosh on GitHub

Mosh

(mobile shell)

Remote terminal application that allows **roaming**, supports **intermittent connectivity**, and provides intelligent **local echo** and line editing of user keystrokes.

Mosh is a replacement for SSH. It's more robust and responsive, especially over Wi-Fi, cellular, and long-distance links.

Mosh is free software, available for GNU/Linux, FreeBSD, Solaris, Mac OS X, and Android.

Mosh Web site ideas
* What should it look like?
** Ideas
*** Building free software Web site...
*** (Lightsey newspaper: "Amazing remote shell program sweeps nation!!!!")
*** Make it look like a fake startup company. <-- Let's go with this.
* Benefits of Mosh
** Roam across Wi-Fi networks or to cell without dropping connection.
** More pleasant to type -- intelligent local echo is instant.
** No need to be superuser to install.
** Mosh doesn't fill up buffers, so Ctrl-C works quickly on runaways.
** Designed from scratch for Unicode! Fixes bugs in SSH, other terminals.
** Free / open-source software.
*U+1F44D+1F44D All LIES (0-g)
```

Change IP. Stay connected.

Mosh automatically roams as you move between internet connections. Use Wi-Fi on the train, Ethernet in a hotel, and LTE on a beach: you'll stay logged in. Most network programs lose their connections after roaming, including SSH and Web apps like Gmail. Mosh is different.

Makes for sweet dreams.

With Mosh, you can put your laptop to sleep and wake it up later, keeping your connection intact. If your Internet connection drops, Mosh will warn you — but the connection resumes when network service comes back.

Get rid of network lag.

SSH waits for the server's reply before showing you your own typing. That can make for a lousy user interface. Mosh is different: it gives an instant response to typing, deleting, and line editing. It does this adaptively and works even in full-screen programs like emacs and vim. On a bad connection, outstanding predictions are underlined so you won't be misled.

No privileged code. No daemon.

You don't need to be the superuser to install or run Mosh. The client and server are executables run by an ordinary user and last only for the life of the connection.

You can do other random things

- ▶ Host random files too large to email
- ▶ Run a Minecraft server
- ▶ Host that one project you want to do
- ▶ Run a Mumble server
- ▶ ...
